

Assignment

Empirical Project (10 pts)

The purpose of your empirical project will be to evaluate a problem of your choice using material and economic letters discussed in this class. In particular, use data to analyze **financial ratios of the company**. These directions are meant to be vague as to allow you as much leeway as possible to explore whatever interests you. However, there are some structural guidelines below that should be followed.

- Choose one company in the stock market. The company cannot be used repetitively.
- Tell about company profile briefly. Why is the company interesting?
- Attach the financial statements of the company for **3 consecutive years (2022-2024)**.
- Calculate the financial ratios and interpret the results.
- Draw conclusion about the status of the company. What is the policy implication?
- You must type every part of the project.
- **Drop your project at my office before the last day of the class.**
- **Late turn in will receive 0 credit.**

Expectation from professor,

- tell about company's profile, what they doing, competency, SWOT analysis (with evidence support coming from competencies), TOWS matrix
- separately analyze in each fields of financial statement then draw the conclusion, analyze the feasibility, suggest best options for strategic decision-making in the lens of investment, have assumption +evidence supports to support that
- make indicators (NPV,IRR,BC ratio, PB) for those suggesting decision making
- income statemen
- financial statement
- analyze in financial economics aspect: IS-LM model, nominal-real interest rate
